Why to use this Latex file

Abstract

In this paper, we will argue that it is reasonable to use the Latex file "submission.tex" for submissions to DL2000. Certainly, one can dispense with an abstract since the papers are quite short anyway.

1 Motivation

If you want to submit a paper to DL2000, you are invited to submit

- a technical paper not exceeding 8 pages that is formatted following this example file or
- a short position paper indicating interest in Description Logics and the workshop.

Using this example file for your submission has two advantages:

1. Since the layout for articles in the DL2000 proceedings will be very similar to the one specified here, you can save time by simply using this file for your submission to DL2000.
2. It is almost a standard LaTeX file, so you should be able to use it without any difficulties. The settings of the margins and parameters will allow you to write slightly more text on 8 pages than with the original LaTeX article settings.

2 Technical Details

This example file is not just a simple LaTeX 12-point article style file as suggested for submissions to previous DL workshops, but a 12-point, twoside article style file with modified layout. The following parameters have been changed and no other changes to the format should be made.

hoffset	-1in
voffset	-1in
oddsidemargin	3.2cm
evensidemargin	3.3cm
headheight	2.5cm
textwidth	14.3cm
textheight	21.5cm

Table 1: Changed parameters

3 Conclusion

We have argued that there are at least two good reasons to use this example file for submissions to DL2000. Apart from the layout, feel free to make changes in this file and to use packages for graphics, theorems, tables, etc.
